A paper providing interesting information of basic science in the field of Crohn's disease. Objections are: a. "Normal control tissue samples were obtained from patients (n= 40) undergoing screening colonoscopies" and "In this study, we collected tissue samples of the ileal lesions from CD patients and normal intestinal mucosal tissue samples from surgical patients with other diseases". These statements clearly disagree, please clarify. Sample selection is a fundamental step of every study. b. it needs to better explain the possible implications of translational medicine.
