Isolated IgG4-related sclerosing cholangitis misdiagnosed as pancreatic cancer: a case report

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC28202062>

Feb 15, 2017 · The most common cause of perihilar obstruction is **cholangiocarcinoma**, especially in Thailand. Benign perihilar stricture represents less than 20% of cases. IgG4-related disease and IgG4-related **sclerosing cholangitis**, however, have been receiving increased attention ...

Isolated IgG4-related sclerosing cholangitis misdiagnosed as pancreatic cancer: a case report

<https://bmcsurg.biomedcentral.com/articles/10.1186/s12893-017-0214-1>

Feb 15, 2017 · Isolated IgG4-related sclerosing cholangitis is less common. The preoperative diagnosis of IgG4-related sclerosing cholangitis without pancreatic involvement is very difficult because the clinical presentation and preoperative evaluation are extremely difficult to distinguish from **perihilar cholangiocarcinoma**.
