**Subtle skills: Using objective structured clinical examinations to assess gastroenterology fellow performance in system based practice milestones**

**Abstract**

BACKGROUND

System based practice (SBP) milestones require trainees to effectively navigate the larger health care system for optimal patient care. In gastroenterology training programs, the assessment of SBP is difficult due to high volume, high acuity inpatient care, as well as inconsistent direct supervision. Nevertheless, structured assessment is required for training programs. We hypothesized that objective structured clinical examination (OSCE) would be an effective tool for assessment of SBP.
