## Fundoplication (GERD) Surgery: Laparoscopic Antireflux ...

<https://www.webmd.com/heartburn-gerd/guide/heartburn-surgery> ▾

The most common reason for surgery is heartburn that doesn't go away with medications and lifestyle changes. Surgery may also be an option when you have: Severe inflammation of your esophagus, the ...

## Fundoplication Surgery for Gastroesophageal Reflux Disease ...

<https://www.uwhealth.org/health/topic/surgicaldetail/fundoplication-surgery-for...> ▾

Nov 07, 2018 · **Fundoplication** Surgery for Gastroesophageal Reflux Disease (GERD) Surgery Overview

**During fundoplication** surgery, the upper curve of the stomach (the fundus) is wrapped around the esophagus and sewn into place so that the lower portion of the esophagus passes through a small tunnel of stomach muscle.

## Nissen fundoplication - Wikipedia

[https://en.wikipedia.org/wiki/Nissen\\_fundoplication](https://en.wikipedia.org/wiki/Nissen_fundoplication) ▾

In a Nissen **fundoplication**, also called a complete **fundoplication**, the fundus is wrapped the entire 360 degrees around the esophagus. In contrast, surgery for achalasia is generally accompanied by either a Dor or Toupet partial **fundoplication**, which is less likely than a Nissen **wrap** to aggravate the dysphagia that characterizes achalasia.

ICD-9-CM: 44.66, 44.67

## All You Need to Know about the Fundoplication – Refluxgate

<https://www.refluxgate.com/fundoplication> ▾

The most common by far is the Nissen **fundoplication**. It is a tight 360-degree **wrap**. The stomach is wrapped all the way around the esophagus. The image above shows a Nissen **wrap**. A Toupet **fundoplication** uses a weaker 270-degree **wrap**. Why are there different types of **fundoplication**? We will talk about that later in the article.

### Wrap choice during fundoplication

Bramhall SR *et al.* Choice of wrap during fundoplication

Simon R Bramhall, Moustafa M Mourad

### Abstract

Gastro-oesophageal reflux disease is an increasing health burden. The mainstay of treatment has conventionally been medical therapy but since the introduction of laparoscopic surgery laparoscopic anti-reflux surgery has been increasingly used for intractable symptoms or in patients unwilling to take long term medication. The Nissen 360 degree wrap has traditionally been considered the gold standard operation but can be associated with significant complications. These complications include 'gas bloat' and dysphagia and can occur relatively frequently. Various modifications have
