## Successful treatment of liver metastasis from solid ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3934044>

Solid pseudopapillary tumor of the pancreas is a rare pancreatic neoplasm that typically occurs in young females. As a low-grade malignancy, the tumor seldom recurs and metastasizes. Management of liver metastasis from such a tumor remains unclear. We present a case of a young girl with liver ...

<https://www.sciencedirect.com/science/article/pii/S0748798314004703>

Introduction. Pancreatic solid pseudopapillary tumors (SPTs) are rare pancreatic tumors with low-grade malignancy and were first reported by Frantz in 1959. 1 The pathogenesis and tissue origin of pancreatic SPT remain unclear. This tumor accounts for 1%–2% of all pancreatic tumors and 13% of surgically resected pancreatic cystic tumors.2, 3, 4 Pancreatic SPT is an epithelial neoplasm ...

<https://www.liebertpub.com/doi/full/10.1089/pancan.2018.0006>

Jun 01, 2018 - Background: Solid pseudopapillary neoplasm of pancreas is a rare tumor with a low potential for metastasis and recurrence. Long-term outcomes after surgical resection are excellent and recurrences after an R0 resection are extremely rare. Case Presentation: We present an unusual case of a 42-year-old man who had a recurrence of his solid pseudopapillary tumor 4 years after ...

Cryoablation for <sup>1</sup>liver metastasis from solid pseudopapillary tumor of the pancreas: A case report

Yang-Yang Ma, Ji-Bing Chen, Juan-Juan Shi, Li-Zhi Niu, Ke-Chen Xu

## Abstract

### BACKGROUND

Solid pseudopapillary tumor (SPT) of the pancreas is a rare pancreatic tumor and 10% to 15% of cases are associated with metastasis. Cryoablation is a new method which can induce tumor necrosis, target tumors are treated with cryoablation to causes anti-tumor immune responses.

<https://www.liebertpub.com/doi/full/10.1089/pancan.2018.0006>

Jun 01, 2018 · Solid pseudopapillary neoplasms of the pancreas (SPNP) are relatively rare tumors comprising around 0.13–2.7% of all pancreatic tumors and 10–15% of all pancreatic cystic neoplasms. 1 These typically present in the second–third decade of life with a 10:1 female predominance. SPNP have a low malignant potential but local invasion can be present and metastatic spread has been reported with liver and peritoneum ...
