Title: Argon-helium cryoablation for thoracic vertebrae with metastasis of hepatocellular carcinoma-related hepatitis B: a case report

Youwen Tan, Yun Ye, Li Sun

Dear Editors and Reviewers:

Thank you very much for your comments regarding our manuscript. We have carefully revised the manuscripts per your suggestion.

Reviewer #1: This manuscript is a case report, detailing the outcome of argon-helium cryoablation for thoracic vertebrae with HCC. After several transarterial chemoembolization (TACE) procedures the patient developed a back pain, and metastasis of the 11th thoracic vertebra. Hence, argon-helium cryoablation was performed. The procedure resulted in an immediate alleviation of the pain and lead to prolongation of the survival. The paper requires some style and language corrections.

A: Thank you for your attention. We invite native Speaker of English to make a language polish once again.

Sincerely.

Youwen Tan, MD,
