Esophageal Tuberculosis is a rare condition (accounts for only 2.8% of all cases of Gastrointestinal Tuberculosis) . I think usually occurs as a result of direct extension of infection from mediastinal nodes, rarely the infection may spread from the lungs or blood stream . I ask question to author. 1. Please tell me the etiology of this esophageal tuberculosis, direct extension of infection from mediastinal node, blood stream. 2. Please tell me what kinds of drug for esophageal tuberculosis do you use?

The authors described here a case of esophageal tuberculosis and complicated with intestinal tuberculosis, which was diagnosed with endoscopy and pathology proof. The coexistence of esophageal and intestinal tuberculosis is rare and the manuscript can be accepted for publication after minor revision. 1. The pathology features of tuberculosis include granuloma, caseous necrosis and multinucleated giant cell (Langhans giant cell). Please describe the typical features of pathological examinations in the esophageal and intestinal lesions.
