## Prostatic stromal sarcoma with neuroectodermal differentiation

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3542249>

To the best of our knowledge, we present the first case of prostatic stromal sarcoma with characteristic immunohistochemical staining properties. Although the biological characteristics of this rare tumor have not yet been elucidated, these findings suggest prostatic stromal sarcoma can potentially show neuroectodermal differentiation.

Dec 07, 2012 - Prostatic stromal sarcoma is a fairly rare tumor that constitutes approximately 0.1–0.2% of all prostatic cancers. Detailed characteristics of the tumor are still unclear due to its rarity. We describe a case of prostatic stromal sarcoma in a 63 year-old man who suffered from urinary obstructive symptoms.
