## SPECIFIC COMMENTS TO AUTHORS

**Reviewer Comments:** The purpose of this review was to describe IAH and ACS in the medical ICU. This paper discusses the understanding, epidemiology, definition, etiology, pathophysiology, measurement and treatment of medical staff. Advantages: 1. The language of the article is clear, the structure is organized and the logical sequence is appropriate. 2. The English expression is accurate. 3. The author has fully mastered the knowledge of IAH and ACS and well master it. Disadvantages: This paper only discussed the contents of medical IAH in epidemiology, pancreatitis and fluid resuscitation, but did not highlight the difference between medical and surgical IAH and ACS, so it was more general. Advice: In this paper, the characteristics of medical IAH and the differences with surgery should be discussed from the perspectives of medical staff cognition, risk factors, treatment plan, timing of abdominal cavity opening, etc.

\*Figure 1 should be referred to within the body of manuscript. \*"Because of the paucity of data on fluid removal, the focus should be more on avoiding excessive fluid administration rather than active fluid removal with diuresis in critically ill patients." I suggest that authors may consider to revise it as follows. "Because of the paucity of data on fluid removal, the focus should be more on excessive fluid administration during resuscitation and optimization phases."
