#### **SPECIFIC COMMENTS TO AUTHORS**

This is a case report of a patient with pancreatic heterotopia in the stomach from which invasive ductal adenocarcinoma developed. Since this is very rare, it should be published. English is good and case report follows accepted standards. One Major change has to be made: The title of the manuscript and the title of table one is totally misleading. Instead of calling the condition "gastric heterotopic pancreas" which is wrong, it needs to be called "pancreatic heterotopia in the stomach". Please change this. otherwise the manuscript is ok.

#### **SPECIFIC COMMENTS TO AUTHORS**

Minor observation: Authors use "mo" instead of month. It sounds a bit slang, I do not advise it in a medical paper.

## **SPECIFIC COMMENTS TO AUTHORS**

This case report of “adenocarcinoma arising from gastric heterotopic pancreas” is clearly documented and summarize the reported cases. I have some comments. Comment 1 I think the main message of this case is the awareness for malignant transformation of heterotopic pancreas. Therefore, the clinical features of malignant heterotopic pancreas that is different from benign heterotopic pancreas is important. Patient’s symptoms are important signs of malignancy as authors described, I think it is also important to diagnose small malignant lesion with no symptoms as reviewed cases. Did the patient in this case or reviewed cases undertake endoscopic ultrasound (EUS) or PET study? And could EUS or PET findings distinguish the malignant and benign lesion? Comment 2 Are there any consensus about the interval of endoscopic examination for surveillance of malignant change of heterotopic pancreas? Comment 3 I think Figure 3 is not essential to the present case. Comment 4 I think the result of immunohistochemical staining is important information in this case, so the figure of immunohistochemical staining is recommended to add.
