Emerging and neglected zoonoses in transplant population

 Mrzljak A *et al.* Emerging/neglected zoonoses and transplant

Anna Mrzljak, Rafaela Novak, Nenad Pandak, Irena Tabain, Lucija Franusic, Ljubo Barbic, Maja Bogdanic, Vladimir Savic, Danko Mikulic, Jadranka Pavicic-Saric, Vladimir Stevanovic, Tatjana Vilibic-Cavlek

Abstract

Zoonoses represent a problem of rising importance in the transplant population. A close relationship and changes between human, animal and environmental health ('One Health' concept) significantly influence the transmission and distribution of

Public Health Threat of New, Reemerging, and Neglected Zoonoses in the Industrialized World. The World Health Organization/Food and Agriculture Organization/World Organisation for Animal Health joint consultation on emerging zoonotic diseases, held in Geneva in 2004, defined an emerging zoonosis as “a pathogen that is newly recognized or newly evolved, or that has occurred previously but ...

EMERGING AND RE-EMERGING ZOONOTIC DISEASES: ...

2017-8-15 · immunocompromised. Cancer patients and transplant patients are examples. The staggering increase in AIDS1 and HIV2 infections worldwide has led to increases in zoonoses and re-emergence of latent infections. Concurrently, in a number of these countries, the fastest-growing cohort of the population are individuals over the age of 60 years. This
