[Drug-induced pancreatitis: lessons in data mining](#)

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC1884633>

Drug-induced pancreatitis is of considerable concern in pharmacovigilance because of the potential for significant morbidity and mortality and the numerous drugs that may be aetiological agents [6–8]. The ability of DMAs to provide meaningful signals of drug-induced pancreatitis is therefore of interest and can be used to illustrate several ...
