SPECIFIC COMMENTS TO AUTHORS

This review is very interesting and complete. Describe very exhaustively the long list of potential drugs that can induce acute pancreatitis and the possible mechanisms involved in this process. The description is well organized by different categories and the diagnostic criteria well comprehensive. This list of references is wide and complete including a total of 149 that support the great clinical interest for this subject. The Figures and Tables are very informative.

SPECIFIC COMMENTS TO AUTHORS

This article reviewed the diversity of DIP and the potential mechanisms of pancreatic injury. It is valuable to help the clinicians to raising awareness of the nature and magnitude of DIP. But there is a small slip that authors made that table1 confused with table2.

SPECIFIC COMMENTS TO AUTHORS

Although the information in the manuscript are not original and are mostly well known the authors presents an interesting overview of the current knowledge. I find the tables usefull for the clinical practice.
