https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6295835

Dec 14, 2018 · INTRODUCTION. The **model** for end-stage liver disease (MELD) score, which has proven to be a good predictor of transplant-**free** mortality for patients with cirrhosis[], has been widely used to prioritize liver transplantation (LT) candidates around the world since 2002, when it was first introduced by the United Network For Organ Sharing (UNOS) in the United States.

Liver transplantation in the critically ill: a multicenter ...
https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4056692
Methods. We performed a multicenter retrospective cohort study consisting of two datasets: (a) all **critically-ill** cirrhosis patients requiring intensive care unit (ICU) admission before LT at five transplant centers in Canada from 2000 through 2009 (one site, 1990 through 2009), and (b) **critically ill** cirrhosis patients receiving LT from ICU (n = 115) and those listed but not receiving LT ...
