**Bronchogenic cyst of stomach: A case report**

He WT *et al.* BC of stomach

Wen-Ting He, Jing-Yu Deng, Han Liang, Jian-Yu Xiao, Fu-Liang Cao

### **Abstract**

#### **BACKGROUND**

Gastric bronchogenic cysts (BCs) are extremely rare cystic masses caused by abnormal development of the respiratory system during the embryonic period. Gastric bronchial cysts are rare lesions first reported in 1956; as of 2019, only 37 cases were available in the MEDLINE/PubMed online databases. BCs usually have no clinical symptoms in the early stage, and their imaging findings also lack specificity. Therefore, they are difficult to diagnose before histopathological examination.

[https://www.researchgate.net/publication/7940173\\_Bronchogenic\\_gastric\\_cyst\\_A\\_case\\_report](https://www.researchgate.net/publication/7940173_Bronchogenic_gastric_cyst_A_case_report)

A **case report**. A **case of congenital bronchogenic cyst** in the gastric mucosa is presented. The **cyst** was lined by pseudostratified epithelium and covered with ciliated cells. **Congenital bronchogenic cysts** should be differentiated from acquired **gastric cysts** lined with ciliated metaplastic cells that evolve as a result of environmental factors.

## Bronchogenic cyst of stomach treated by surgical resection ...

<https://onlinelibrary.wiley.com/doi/pdf/10.1111/1744-1633.12396>

**Bronchogenic cysts** are **congenital cystic lesions** arising from abnormal budding of the primitive tracheobronchial tube. Most of the **bronchogenic cysts** are found in the mediastinum, while abdominal **bronchogenic cysts** are rare with only 39 **cases reported** in the literature to date.
