Role of microRNAs in the predisposition to gastrointestinal malignancies

Baz M *et al.* miRNAs predisposing to GI cancer

Maria Baz, Tony Ibrahim

Abstract

MicroRNAs (miRNAs) are highly deregulated in cancer and play a role in the initiation of tumorigenesis. Recently, miRNAs have attracted attention in

The Role of microRNA in Gastric Malignancy

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3676795>

Helicobacter pylori (*H. pylori*) infection is the main cause of gastritis, gastro-duodenal ulcer, and gastric **cancer**. **MicroRNAs** (miRNAs) are small noncoding RNAs that function as endogenous silencers of numerous target genes. Many miRNA genes are expressed in a tissue-specific manner and play important **roles** in cell proliferation, apoptosis, and differentiation.
