Gastrointestinal (GI) cancers remain one of the most common malignancies and are the major cause of cancer deaths worldwide. miRNAs play an important role in modulating various biological processes. This review summarizes recent research supporting the utility of miRNAs as novel diagnostic/prognostic tools and therapeutic targets for GI cancers. I strongly recommend that the authors discuss the relationship between miRNAs and circRNAs in depth and the implications for guiding gastrointestinal tumors (ref. Circular RNAs: The star molecules in cancer. *Molecular Aspects of Medicine*, 31 October 2019, 70:141-152. DOI: 10.1016/j.mam.2019.10.006).

This mini-review can provide readers the summerized information on the association between GI cancers and SNPs affecting the miRNA “pathway” genes. It has some scientific meanings, and can be considered for publication.
