**Status, challenges and future prospects of stem cell therapy in pelvic floor disorders**

Juan Cheng, Zhi-Wei Zhao, Ji-Rui Wen, Ling Wang, Li-Wei Huang, Yan-Lin Yang, Feng-Nian Zhao, Jing-Yue Xiao, Fei Fang, Jiang Wu, Ya-Li Miao

**Abstract**

Pelvic floor disorders (PFDs) represent a common and frequently-occurring disease that seriously affects the life quality of women, generally including stress urinary incontinence (SUI) and pelvic organ prolapse (POP). The treatment for PFD has been surgery, with almost 30% of patients requiring subsequent surgery due to a high incidence of postoperative complications and high recurrence rates.
