

## Answering Reviewers

Dear reviews,

Thank you for your comments. We thought your advice was important and helpful for our article. We tried to revise the MS as you suggested us to do to improve our writing. The questions were answered as follows:

1) Title: A review of serum biomarkers, staging, and managements, comment: remove the (s) from management(S)

**Response:** Thank you for your comments. We have revised the title and please view the changes in Line 6.

2) Can you revise this sentence: Developing the classic symptoms of hypoglycemia requires 12 h in 80% of the subjects and most patients suffer from Whipple's triad in the first 48 h. add: (requires 12 h of fasting) and perhaps describe what constitutes whipple triad?

**Response:** Thank you for your comments. We have revised the sentence and added the description of Whipple triad. Please view the changes in Line 197-200.

3) Clarify this sentence: "A cut-off of  $\geq 120$  pg/mL is considered positive with a diagnostic sensitivity of 94% and specificity of 100%". suggestion: An increase in gastrin by  $\geq 120$  pg/mL over baseline is considered positive with a diagnostic sensitivity of 94% and specificity of 100%"

**Response:** Thank you for your comments. We have clarified the sentence and please view the changes in Line 235-237.

Thank you for your comments again and wish you all the best.
