SPECIFIC COMMENTS TO AUTHORS

1. The discussion can be extended to include any similar cases described previously and highlight the treatment plan and prognosis of the lesion. 2. The authors can discuss the diagnostic work-up of these patients who may initially present with demyelinating polyneuropathy without the typical symptoms of the lymphoplasmacytic lymphoma. 3. Is demyelinating polyneuropathy associated with lymphoplasmacytic lymphoma only or can it be seen with other forms of lymphoma as well. 4. Is hypothyroidism a chance finding or associated with the above conditions? Any available literature can be cited.
