

Dear Reviewers and Editors,

Thank you so much for your comments to our manuscript entitled “Structure and function of Septin 9, and its role in human malignant tumors” and greatly appreciates for your suggestions. We revised the paper according to the reviewer’s suggestions and all these revisions were marked with red.

Comments:

**Reviewer #1:** In this minireview, Jie Sun and colleagues summarized the progress in research on the SEPT9 gene in early screening, diagnosis, and prognosis of tumors. Generally, this article is prepared ordinary. The references are sufficient to support this review. The minor concern is the writing quality. Though the authors provide the Non-Native Speakers of English Editing Certificate, few typing errors are noted. Otherwise, this is a acceptable work in this field.

**Re:** Thank you for your suggestions. We have double-checked the paper to correct the grammar mistakes and linguistic errors in the text.

**Reviewer #2:** this review is an interesting topic, however some comments are highlighted below: 1- it is advisable to add a study flow chart and a descriptive figure for sept 9 2- is sept is a tissue or blood marker, wat about the price and availability of this marker. 3- some comments are included in the uploaded file.

**Re:** Thank you for your sincere comments. A study flow chart has been added in the text to describe the structure of this review. The descriptions of the price and availability of this marker have also been added in the text.

**Reviewer #3:** it is a well documented review

**Re:** Thank you very much.
