SPECIFIC COMMENTS TO AUTHORS

It is a rare and interesting case with good image quality. Rather than talking about the prognosis of the disease in the conclusion of the abstract, it would be more helpful to repeat the important radiologic features. Figure 4 is not significant in patient diagnosis or prognosis, so it would be better to remove it. The arrow description is missing in figure 5. Figure 5 and 6 is so zoomed in that I can't see the lesion well, isn't it?

SPECIFIC COMMENTS TO AUTHORS

Minor points 1)English: To be revised. 2)Abstract: I cannot understand what means “ectopic acute calculous cholecystitis” (P.2, L.11) 3)Keywords: Please delete “Case report”. Gallbladder torsion and gallbladder volvulus are the same thing. Please delete one of them. 4)Introduction: There are some ambiguous expressions (e.g.: along the axis of the cyst, on its pedicle--). 5)Case presentation Imaging examinations: Interpretation of imaging examinations is insufficient. Generally speaking, abdominal ultrasonography (B-mode) reveals very clearly the global image of gallbladder, and the diagnosis of gallbladder torsion is immediately and easily established. There is no description of color Doppler ultrasound. The presence or absence of portal vein abnormalities (thrombus, abnormal course, etc.) or hepatic deformity (lobar atrophy) is not mentioned. Please show ultrasound images. 6)Discussion: Please compare the present case and previous cases meticulously and emphasize the strength of this case presentation.
