Endosonographic diagnosis of **advanced** neoplasia in intraductal papillary mucinous neoplasms

Andrew Eiterman, Ali Lahooti, Somashekar G Krishna

### Abstract

Pancreatic cancer has a high mortality rate with minimal proven interventions. Intraductal Papillary Mucinous Neoplasms (IPMNs) are known precursor lesions for pancreatic cancer. Identification of pancreatic cysts has improved from advances in abdominal imaging. Despite multiple revisions of the international

## Surgical strategy for intraductal papillary mucinous ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6923258>

Dec 05, 2019 · The current treatment strategy for **intraductal papillary mucinous** neoplasms (IPMNs), based on the international consensus guideline, has been accepted widely. However, reported outcomes after surgical resection for **IPMN** show that once the tumor progresses to invasive **intraductal papillary mucinous** carcinoma (IPMC), recurrence is not uncommon.
