Longer-term statin use linked to prostate cancer risk reduction. Men who take statins for at least 11 months might be at lower risk for low- and high-Gleason grade **prostate cancer than men who do not take the cholesterol-lowering drugs**, according to a recent study (Cancer Medicine Oct. 8, 2019 [Epub ahead of print]).

Statin

Drug Class

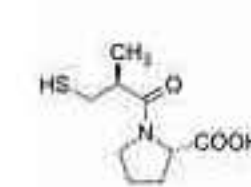

Statins, also known as HMG-CoA reductase inhibitors, are a class of lipid-lowering medications that reduce illness and mortality in those who are at high risk of cardiovascular disease. They are the most common cholesterol-lowering drugs.
