Introduction. Endoscopic mucosal resection (EMR) 1-3 and endoscopic submucosal dissection (ESD) 4 are endoscopic resection (ER) methods developed in Japan for the treatment of patients with esophageal cancer. These methods have gained widespread popularity in Asia and various Western countries. However, although ER represents an excellent treatment option, misjudgment of the ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7055622>

Background and study aims In colorectal endoscopic submucosal dissection (ESD), the S-O clip improves the accessibility to the submucosal layer of the colon. However, its safety and usefulness in difficult colorectal ESDs are unclear. Thus, in this study, we aimed to assess the effectiveness of the S-O clip in colorectal ESD in the difficult-to-access submucosal layer.
