Sustained multiple organ ischaemia after transarterial ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5774377>

Introduction. Hepatocellular carcinoma (HCC) is a common type of **cancer** that is usually diagnosed at an advanced stage. **Transarterial chemoembolization** (TACE) is widely used to treat HCC patients who cannot be given curative treatments (1,2). The TACE protocol includes intra-arterial chemotherapy with lipiodol and chemotherapeutic agents, followed by selective vascular embolization with gelfoam.
