Aug 13, 2011 · Tumors involving the **pyloric channel** have been considered as difficult lesions for successful **endoscopic resection**. We studied the feasibility of **endoscopic submucosal dissection** (ESD) using **retroflexion** in the **duodenum** to resect the **gastric neoplasia** involving the **pyloric channel**.

## Procedure Time for Gastric Endoscopic Submucosal ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5204075>

Dec 19, 2016 · 1. Introduction. The **endoscopic** submucosal dissection (ESD) technique was introduced to facilitate en bloc **resection** of early gastrointestinal **neoplasms**, which allows for precise histological diagnosis and minimizes the chances of recurrence [1, 2]. The popularity of ESD has rapidly increased in Asia and the rest of the world.

Four **tumors** (2 adenomas and 2 early **gastric cancers**) were extended from the pyloric area to the **duodenal bulb**. Endoscopic mucosal resection was attempted in 6 cases, and ESD was attempted in 10 cases, including 4 cases of **duodenal bulb extension**. The **curative resection** rate was 81.3% (13 of 16), and the **en bloc resection rate** was 75% (12 of 16).

Dec 19, 2016 · We included 302 cases of **en bloc and R0 resection** of **gastric neoplasms** performed by 10 operators who had completed the training program at our hospital. Twelve locations were classified based on multiple criteria, such as condition of surrounding **mucosa**, **lesion vascularity**, presence of **submucosal fat**, ulcers, scars, fibrosis, and scope and device maneuverability.
