#### **SPECIFIC COMMENTS TO AUTHORS**

The Authors propose the hospital-based study to evaluate the effectiveness and safety of antithrombotic strategies in elderly with acute myocardial infarction. There are several areas from methodological viewpoint where the manuscript needs to be strengthened. 1. Please describe more details to calculate the power of this study. 2. Flow chart of selection of the study sample and procedure is suggested. 3. Statement of Ethics: Authors should state the approval of Institutional Review Board 4. The authors should point and clarify the feature and novel findings of this study. 5. Describe any efforts to address potential sources of bias, if applicable. 6. How physicians or policy makers could deliberate with patients or people based on the key findings of this manuscript? 7. More discussion regarding the clinical practice of their findings would be important for the specific journal. 8. Please consider the comparison with the other epidemiological studies in other areas using table so make clear the significance of this study. Totally, I would like to congratulate the authors for the enthusiasm invested in this study. However, the manuscript does not reach the level of quality required for publication as original article without major revision in World Journal of Cardiology.
