SPECIFIC COMMENTS TO AUTHORS

This manuscript has attempted to throw light on the use of post-mortem computerized tomography (PMCT) for elaborating on the cause of death. There are certain errors of grammar, such as usage of comma and articles, etc. These can easily be corrected. Kindly get the manuscript reviewed for the same. The use of any abbreviation is to be preceded by its expansion when used for the first time. Please provide the same for PMCT. Please highlight the strengths of the report. Using a reference in the conclusion section is not needed.

SPECIFIC COMMENTS TO AUTHORS

Sudden unexpected infant death (SUID) is quite complex. Underlying causes may be multiple, therefore, depending on this investigation, the authors recommended that postmortem computed tomography (PMCT) is a useful tool instead of giving the frequent of autopsy findings as to cause of death. The author's intention is generally convincing. Even so, the uncertainty of the content should be resolved by considering the following comments. 1. The purpose of the author's investigation did not sufficiently reflect. Especially in the contents of 'Abstract', and 'Introduction'. 2. It is unclear whether the authors have intended to highlight the benefits of PMCT only or to support the analysis of immunohistochemistry. Actually, the results for PMCT could be specifically supported by autopsy and immunohistochemical analysis. 3. It is encouraged the authors to carefully review the use of articles (indefinite article and definite article) and commas.
