Identification of APEX2 as an oncogene in liver cancer

Zheng R *et al.* APEX2 is an oncogene in liver cancer

Ru Zheng, Heng-Liang Zhu, Bing-Ren Hu, Xiao-Jiao Ruan, Hua-Jie Cai

Abstract

BACKGROUND

DNA damage is an important risk in the cell malignancy, and it contributes to the occurrence and development of some cancers. APEX1 and APEX2 were identified as the most important molecules in the DNA damage, and APEX1 has been identified as a diagnostic and prognostic biomarker in liver hepatocellular carcinoma (LIHC). However, the expression of APEX2 and the
