#### **SPECIFIC COMMENTS TO AUTHORS**

Authors relate their own experience dealing with patients infected by COVID-19 virus. This is a current theme, in a serious and urgent need of information. Nobody has seriously talked about what to do with patients and medical care people involved in a pandemic process. The last known pandemic disaster occurred more than a century ago, before electronic microscopes design. At that time nobody knew anything about virus, and even less about how to care the emotional aspect of infected people. This manuscript, besides very well written, is strongly supported by a solid humanistic approach.
