SPECIFIC COMMENTS TO AUTHORS

This manuscript is retrospective study regarding the clinical and pathological records related with pancreatic mucinous cystic neoplasm and cystadenocarcinoma. The study design is good with a clear aim. And the results indicated that the mucinous cystadenocarcinoma diameter was larger than that of mucinous cystic neoplasm. Surgical resection is the primary treatment modality. The tables help the readers to make a more understanding of the study. Overall, the manuscript is very well written. Title reflects the main subject of the manuscript. Some minor language polishing should be corrected.

SPECIFIC COMMENTS TO AUTHORS

Excellent study. The study aims to investigate the clinical characteristics and management strategies for pancreatic mucinous cystic neoplasm and mucinous cystadenocarcinomas. The results were well discussed that serum CEA and CA125 can be used as an effective tool to help clinicians quickly identify pancreatic mucinous cystic neoplasm and mucinous cystadenocarcinomas. Surgical resection is an effective treatment. In this point of view, this study will be important and interesting to the clinician. Some latest references should be added.

SPECIFIC COMMENTS TO AUTHORS

Owing to the development of imaging and endoscopic techniques, as well as the increased understanding of the disease, the prevalence of mucinous cystic neoplasm has been increasing every year. Mucinous cystadenocarcinoma may be formed via the malignant transformation of mucinous cystic neoplasm with the same origin. Mucinous cystadenocarcinoma has poor sensitivity to radiotherapy and chemotherapy, and surgical resection is the primary treatment modality for mucinous cystadenocarcinoma. Due to the potentially malignant manifestations and the lack of specific clinical symptoms, the early diagnosis and treatment of mucinous cystic neoplasm are important. In this study, the authors analyzed the data of 78 pancreatic mucinous cystic neoplasm and mucinous cystadenocarcinoma patients, and investigated the clinical characteristics and management strategies. Overall, this study is very interesting, and the manuscript is very well designed. Results are well discussed. Minor comments: 1. The number of the patients is different between the tables 1-3, this should be explained or noted in the main text. 2. The manuscript is very well written, however, a minor editing is required for both the format and the language.

SPECIFIC COMMENTS TO AUTHORS

Very interesting study of the clinical diagnosis and management of pancreatic mucinous cystic neoplasm and cystadenocarcinoma. The manuscript is very well written. I recommend to accept this manuscript for publication.
