Hepatitis C virus cure with direct acting antivirals ...

https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6547290

May 27, 2019 · Core tip: Chronic hepatitis C is a systemic disease that manifests both hepatically and extrahepatically, leading to impaired patient-reported outcomes (PROs) and huge economic burden on the healthcare system and society. Direct acting antivirals are effective hepatitis C therapies that improve PROs and have broad eligible patient populations, good efficacy, few adverse events, and ...

Effect of treating chronic hepatitis C with direct acting antivirals on extrahepatic cutaneous manifestations

El Kassas M *et al.* Effect of treating HCV on cutaneous manifestations

Mohamed El Kassas, Osama MO Hegazy, Eman M Salah

Abstract

BACKGROUND

Hepatitis C virus (HCV) is a disease with a significant global impact, affecting about 2%-2.5% of the world's population. New direct acting antiviral (DAAs) drugs have been introduced over the past few years with great success in viral eradication. The association of chronic HCV infection with a wide spectrum of cutaneous manifestations has been widely reported in the literature.
