**Name of Journal:** *World Journal of Clinical Cases***Manuscript NO:** 56585**Manuscript Type:** CASE REPORT**Primary chondrosarcoma of the liver: A case report**

Zhuo-Yan Liu, Xue-Mei Jin, Guang-Hai Yan, Guang-Yu Jin

**Abstract**

## BACKGROUND

Primary chondrosarcoma of the liver are extremely rare. Moreover, there are few data focusing on typical clinical symptoms and imaging characteristics. Therefore, the diagnosis of chondrosarcoma of the liver remains a challenge.

## Chondrosarcoma

Medical Condition

A cancer that starts in the cartilage

- Symptoms are seen at the area of tumor
- Pain that gets worse over time and with physical activity
- Swelling and tenderness
- Weak bones that fracture easily

A malignant tumor of cartilage-producing cells.

Rare (Fewer than 200,000 cases per year in US)

Requires lab test or imaging

Treatment from medical professional advised

Can last several years or be lifelong

Exact cause is not known. Occurs as a result of genetic mutations or transformation of benign cartilage lesions into malignant cancers. Characterized by increasing pain, swelling, palpable mass and recurrent fractures. Excisional surgery is the main treatment as most are considered refractory to chemotherapy or radiation therapy.

### Symptoms

Symptoms are seen at the area of tumor

- Pain that gets worse over time and with physical activity
- Swelling, stiffness, and tenderness at the affected area
