Severe hyperlipemia-induced pseudoerythrocytosis: Implication for misdiagnosis and blood transfusion: A case report and review of literature

Xi-Chen Zhao, Bo Ju, Na Wei, Jian Ding, Fan-Jun Meng, Hong-Guo Zhao

Abstract

BACKGROUND

Severe hyperlipemia (SHLE) has an impact on the results of many kinds of laboratory tests. Complete blood count (CBC) examination by automated blood cell counter (ABCC) is a quick and convenient measurement for screening abnormalities of blood cells that are triggered by various pathogenic insults in disease diagnosis and for monitoring changes in the treatment of existing hematological conditions. However, CBC results are frequently affected by many intrinsic and extrinsic factors from blood

Case report. Tonsils serve as a defense line against oropharyngeal infections. Tonsillitis is an inflammation of the palatine tonsils, self-limited and associated with viruses. Bacterial etiology are <10%. When inflammation is refractory further workup is warranted. Lymphoid malignancy is common but tonsillar malignancy is rare.
