#### **SPECIFIC COMMENTS TO AUTHORS**

What test should be done to find out that patient has active infection of TTV? In what setting TTV test should be done. Any treatment available? Does it really cause any clinical effects? The should clarify these.

#### **SPECIFIC COMMENTS TO AUTHORS**

I have read with great interest the manuscript entitled “Torque teno virus in liver diseases and after liver transplantation” submitted to the World Journal of Transplantation. The manuscript is well written and I would like to congratulate the authors. In this editorial the role of TTV viral load as a biomarker for immune monitoring in liver transplant recipients is discussed and it end up concluding further trails are required. Despite limitations of the method (editorial) and the fact that the manuscript does not add new data in the literature, the topic is of clinical interest and the discussion valid. My MINOR COMMENT is related to language. Although the manuscript is well written, it would benefit from further proofreading.
