SPECIFIC COMMENTS TO AUTHORS

POPS guided-lithotripsy was an important endoscopic therapy. However, the total number of cases is not large, and there are only a few cases in each hospital after dispersion, which is too low in cost performance and not conducive to the training of professional endoscopic physicians. The author thinks that it is reasonable and feasible to concentrate the patients in need.

SPECIFIC COMMENTS TO AUTHORS

First I would like to congratulate for putting forward this newer aspect of treatment modality of chronic pancreatitis. The manuscript is well written and various aspects have been described. As there is limited data to support and limited availability, it will be hard to implement this options at present. Similarly, other treatment options at each stage of disease need to be compared in both short term & long term outcomes of CP. Also development of complications, recurrence of symptoms along with need of surgery in follow up need to be analyzed well before drawing any definite conclusion regarding widespread use.
