**Do available data support the widespread adoption of pancreatoscopy guided-lithotripsy?**

Luca De Luca

### Abstract

Peroral pancreatoscopy (POPS) is a demanding endoscopic procedure that can be used to perform intracanal lithotripsy in obstructing pancreatic stones, but the experience is limited. The most of them can be removed successfully by endoscopic retrograde cholangio-pancreatography (ERCP) but the patients with large stones require advanced therapeutic approach such as extracorporeal shock wave lithotripsy (ESWL) (alone or followed by

## ERCP with Digital Pancreatoscopy-Guided Stone ...

<https://link.springer.com/article/10.1007/s10620-019-05502-z> ▾

Feb 20, 2019 · Technical expertise in pancreatic endotherapy is a prerequisite to initiating **pancreatoscopy-guided lithotripsy**. Future studies will need to compare **pancreatoscopy** to ESWL in facilitating the clearance of main pancreatic duct stones and assess patient-centered outcomes of quality-of-life, validated pain scores, and longer-term follow-up in this ...
