## Manuscript Title:

Abdominal ventral rectopexy with colectomy for obstructed defecation syndrome: an alternative option for selected patients

## Date of Revision:

May 21, 2020

### Abstract:

**Background** The use of abdominal ventral rectopexy (AVR) with colectomy is controversial for the treatment for obstructed defecation syndrome (ODS). The literature data are very limited. The purpose of this study is to evaluate the safety and efficacy of AVR with colectomy for ODS.

**Methods** Consecutive patients who underwent AVR with colectomy for ODS were identified prospectively from 2016 to 2017 in our department. Demographics of patients, perioperative surgical results, and postoperative follow-up outcomes were collected and analyzed. Long-term follow-up was evaluated with standardized questionnaires. The severity of symptoms was assessed by the objective Wexner...

This document certifies that the manuscript listed above was copy edited for proper English language at LetPub. All of our language editors are native English speakers with long-term experience in editing scientific and technical manuscripts. We are committed to leveling the playing field for researchers whose native language is not English.

- Neither the research content nor the authors' intended meaning were altered in any way during the editing process.
- Documents receiving this certification should be considered ready for publication where language issues are concerned.  
*However, the authors may accept or reject LetPub's suggestions and changes at their own discretion.*
