Endoscopic Ultrasound-Guided Gallbladder Drainage Using a ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6182281>

Indications. The most common indication for the procedure was acute cholecystitis [7,9,11-16] in addition to acute **cholangitis** [], GB hydrops [10,11], or biliary obstruction. The procedure was performed in an isolated condition or a combination of cholelithiasis and biliary obstruction. The procedure was performed in malignancies such as **pancreatic** adenocarcinoma, cholangiocarcinoma, and gallbladder cancer.

An 81 year old man with metastatic pancreatic cancer, diabetes mellitus, and other comorbidities developed fever, right upper quadrant pain with a serum bilirubin of 9.8 mg/dL, an alkaline phosphatase of 770 U/L, and an AST of 110 U/L. His white blood count was 15,000/uL. CT scan showed findings consistent with a malignant biliary obstruction and acute cholecystitis. The gallbladder was enlarged and distended with a thickened wall and dense internal contents. Genera...

Endoscopic ultrasound-guided gallbladder drainage for ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5677460>

Results. EUS-guided drainage for cholecystitis was performed in 16 patients (mean age 84 years; nine males). Technical and clinical success rates were 100 % (16/16) and 94 % (15/16), respectively; an early failure due to stone impaction occurred in the remaining case and required placement of a new stent.

Endoscopic ultrasound-guided gallbladder drainage for the ...

<https://onlinelibrary.wiley.com/doi/full/10.1002/jhbp.182>

Endoscopic ultrasound-guided gallbladder drainage is a promising novel intervention for the treatment of acute cholecystitis in high surgical risk patients. Technical and clinical success rates of EUS-GBD in excess of 95% have been reported, with mostly minor adverse events in less than 10% of cases.

Long-term outcomes of elective EUS-guided gallbladder ...

[https://www.tijournal.org/article/S2590-0307\(20\)30133-1/fulltext](https://www.tijournal.org/article/S2590-0307(20)30133-1/fulltext)

Endoscopic ultrasound (EUS)-guided gallbladder drainage (GBD) has gained increasing popularity as an alternative treatment approach for acute cholecystitis in high-risk patients. We report the procedural and long-term outcomes of elective EUS-GBD using self-expandable metallic stents (SEMSs) after percutaneous transhepatic gallbladder drainage (PTGBD) for acute cholecystitis.

In addition, EUS-guided gallbladder drainage can be performed if bile duct puncture is unsuccessful, and it can achieve biliary drainage through the cystic duct. However, EUS-guided gallbladder drainage can be performed only in cases with the patent cystic duct, which should be confirmed on EUS prior to the procedure 82. In contrast, in ...

What Yo

Endoscopic ultrasound (EUS) is a minimally invasive procedure to assess digestive (gastrointestinal) and lung diseases. A special endoscope uses high-frequency sound waves to produce detailed images of the lining and walls of your digestive tract and chest, nearby organs such as the pancreas and liver, and lymph nodes. When combined with a procedure called fine-needle aspiration, EUS allows your doctor to sample (biopsy) fluid ...

Outcomes of endoscopic biliary drainage in pancreatic ...

<https://www.sciencedirect.com/science/article/pii/S0016510718300518>

Jul 01, 2018 · All consecutive patients with indwelling GDSs between March 2009 and March 2014 were identified in the medical databases of the 5 centers. Patients were included if they were diagnosed with unresectable pancreatic cancer by either pathology or typical radiologic findings, with compatible clinical presentation and underwent endoscopic biliary drainage after GDS placement.

Some results are removed in response to a notice of local law requirement. For more information, please see [here](#).

Cristina Bezzio, Barbara Omazzi, Ilaria Arena, Alberto Larghi, Gianpiero Manes

Abstract

BACKGROUND

Head pancreatic cancers often present with clinical challenges requiring biliary drainage for chemotherapy or palliative scope. When usual endoscopic modalities fail or if percutaneous approach is not feasible, endoscopic ultrasound (EUS) guided biliary
