SPECIFIC COMMENTS TO AUTHORS

The study is a good review of nearly all studies relating NAFLD and mechanisms and outcomes in non-obese individuals (lean and overweight patients). The study is convenient for all readers interested in hepatic diseases. Major point 1) I would recommend the authors to re-examine the values (20% and 40%) as shown in the Core tips (pag. 3). At a first glance they seem to be exaggerated.

The small statement added in the Core tips in page 3 improves the text as the values in the first manuscript seemed to be exaggerated in most cases.
