PURPOSE OF REVIEW: Pancreas transplantation is still hampered by a high incidence of early graft loss, and organ quality concerns result in high nonrecovery/discard rates. Demographic donor characteristics, surgical retrieval strategy, preservation fluid and ischemia time are crucial factors in ...

The main reasons for this are the lack of good-quality donor grafts and improvement in DM treatment, even though pancreas transplantation leads to more stable glycated hemoglobin (HbA1c) levels compared with strict insulin regimens, and long-term results of simultaneous pancreas-kidney (SPK) transplantation demonstrate a clear survival benefit as compared with patients who remain on the waiting list.

Pancreas Transplantation from Donors after Circulatory ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6861341>

In 2010, the pancreas donor risk index (PDRI) was designed using data from the organ procurement and transplantation network (OPTN) with the aim to identify factors associated with pancreas graft survival after 1 year . This index includes donor factors as well as transplant factors: **donor gender**, **age**, **race** (black/Asian), BMI, height, cause of death, serum creatinine, DCD status, **preservation time**, and type ...

Pancreas Donor Risk Index but Not Pre-Procurement Pancreas ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6248050>

In 2010, Axelrod et al. analyzed data from 9401 pancreas transplantations (PT) in the USA and calculated a pancreas donor risk index (PDRI) to predict one-year pancreas graft survival . This risk ratio compares the one-year pancreas graft survival of the donor at hand with a reference donor from the same study.

Donor risk factors in pancreas transplantation

Luis Muñoz-Bellvis, Jaime López-Sánchez

Abstract

The aim of the work is to analyze and expose the donor and recipient risk factors in pancreas transplantation. In the following paper, we expose the 2018 Spanish Consensus Document on Donor and Recipient Selection Criteria for Pancreas Transplantation. An assessment of the previous Selection Criteria for Donors and Recipients of Pancreas Transplantation, published in 2005 by the Spanish Pancreas Transplant Group (GETP) and the National Transplant Organization (ONT) was

PURPOSE OF REVIEW: Pancreas transplantation is still hampered by a high incidence of early graft loss, and organ quality concerns result in high nonrecovery/discard rates. Demographic donor characteristics, **surgical retrieval strategy, preservation fluid and ischemia time** are crucial factors in the process of organ selection and are discussed in this review.
