Human papillomavirus-related esophageal cancer survival

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5120915>

Nov 18, 2016 · **Esophageal cancer** is the eighth most common **cancer** globally, with an estimated 455,784 new cases in 2012, and the sixth most common cause of death from **cancer**, with an estimated 400,156 deaths. Furthermore, the number of **esophageal cancer** deaths will have increased to 728,945 by the year 2035. The etiology of **esophageal cancer** remains unclear.

<https://academic.oup.com/jnci/article/91/2/156/2549313> ▾

Jan 20, 1999 · Infection with **human papillomavirus** (HPV), especially HPV type 16, has recently been implicated as a possible risk factor for **esophageal cancer** in three seroepidemiologic studies (5 - 7). In two prospective studies (6 , 7), HPV16 seropositivity was associated with a more than sixfold excess risk.

Human papillomavirus and the risk of Barrett's esophagus

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4412355>

Human papillomavirus (HPV) is strongly associated with squamous **esophageal cancer**. The potential role of HPV in Barrett's **esophagus** (BE) has been examined but remains unclear. The aim of the study was to determine the prevalence of HPV in **esophageal** and gastric tissues obtained from patients with and without BE.

<https://pubmed.ncbi.nlm.nih.gov/27489353>

High-risk human papillomavirus (HPV), especially HPV16, correlates with cancerogenesis of human esophageal squamous cell carcinoma (ESCC) and we have reported that HPV16 related with a poor prognosis of ESCC patients in China. We aim to investigate the potential role and mechanism of HPV16 in ESCC development and progress.

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3260131>

Jan 18, 2012 · Background. The role of human papillomavirus (HPV) in the causation of esophageal squamous cell carcinoma is unclear. We examined the associations between esophageal squamous cell carcinoma and 28 centrally measured HPV serological markers in serum from six existing case-control studies conducted in regions with differing background risks of esophageal cancer.

Circulating human papillomavirus DNA detection in Barrett ...

<https://pubmed.ncbi.nlm.nih.gov/31313804>

There is evidence to suggest that human papillomaviruses (HPV) are associated with Barrett's dysplasia and esophageal adenocarcinoma. In other HPV-linked cancers such as cervical and oropharyngeal cancer, circulating HPV DNA is a potential biomarker to assist in tumor diagnosis and management.

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3709056>

Jul 20, 2013 · INTRODUCTION. Human papillomavirus type 16 (HPV16) is recognized as a cause of virtually all cervical cancers and of a substantial proportion of other anogenital cancers and oropharyngeal cancers. 1 The association between HPV16 and cancers of the oral cavity and larynx is less clear but, if associated, the attributable proportion is small. 1 HPV16 has been associated with a ...

Cancers Associated with Human Papillomavirus (HPV) | CDC

https://www.cdc.gov/cancer/hpv/basic_info/cancers.htm

Almost all cervical cancer is caused by HPV. Some cancers of the vulva, vagina, penis, anus, and oropharynx (back of the throat, including the base of the tongue and tonsils) are also caused by HPV. Research is still being done to understand how and to what extent HPV causes these cancers. In general, HPV is thought to be responsible for more than 90% of anal and cervical cancers, about 70% of ...

Environmental Causes of Esophageal Cancer

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2685172>

Esophageal cancer (EC) is the 8th most common incident cancer in the world and, because of its high fatality rate, ranks 6th among all cancers in mortality [1,2]. It is not surprising, therefore, that the etiology of EC has been investigated for over a century. Based on clinical observations, Craver in 1932 and Watson in 1939 list excessive use of alcohol and tobacco, low socioeconomic status ...

HPV and Oropharyngeal Cancer | CDC

https://www.cdc.gov/cancer/hpv/basic_info/hpv_oropharyngeal.htm

Human papillomavirus (HPV) can cause serious health problems, including warts and cancer. What is HPV? HPV is the most common sexually transmitted infection in the United States. Of the more than 100 types of HPV, about 40 types can spread through direct sexual contact to genital areas, as well as the mouth and throat.
