Adolescent patients who require the care of a nephrologist present with a variety of challenges. For the treating physician, it is important to be competent in relevant principles of adolescent physiology, such as somatic growth and puberty. It is also essential to be familiar with the stages of adolescent emotional and intellectual development, and their influence on behavior and adherence.

Background/Aim. Clinical learning is a main part of nursing education. Students' exposure to clinical learning environment is one of the most important factors affecting the teaching-learning process in clinical settings. Identifying challenges of nursing students in the clinical learning environment could improve training and enhance the quality of its planning and promotion of the students. We aimed to explore Iranian nursing students' challenges in the clinical learning environment. Materials and Methods...
