In this report, we present the findings of a case of gastroduodenal intussusception caused by an **underlying gastric GIST complicated with acute pancreatitis**. According to our literature review, this is the first reported case of gastric GIST presenting with gastroduodenal intussusception accompanied with acute pancreatitis.

<https://insights.ovid.com/surgical-laparoscopy...> ▾

A **computed tomography scan** revealed a gastroduodenal intussusception of the gastric GIST. The patient underwent a laparoscopic exploration and resection of the GIST. We reviewed the English language literature of GISTs that presented as a gastroduodenal intussusception and put our case in the context of the previously reported cases.

Discussion. Adult intussusception occurs infrequently and its diagnosis can be delayed because of nonspecific symptoms. In adults, 90% occur in the small or large intestine, and gastroduodenal intussusception is extremely uncommon []. The lead point of the gastroduodenal intussusception is usually a pedunculated benign gastric tumor []. Polyps constitute 40% and intramural smooth muscle tumors ...

Abstract. Gastrointestinal stromal tumors (GISTs) are the most common mesenchymal tumors in adults. They frequently occur in the stomach. Gastric GISTs typically present as a gastrointestinal bleed but can sometimes cause **obstructive symptoms such as nausea and vomiting**. We present a patient with a
