Manuscript Type: CASE REPORT

Endoscopic radial incision and cutting technique for treatment-naïve stricture of colorectal anastomosis: Two case reports

Taek-Gu Lee, Soon Man Yoon, Sang-Jeon Lee

Abstract

BACKGROUND

Anastomotic stenosis (AS) after colorectal surgery was treated with balloon dilation, endoscopic procedure or surgery. The endoscopic procedures including dilation, electrocautery incision, or radial incision and cutting (RIC) were preferred because of lower complication rates than surgery and are less invasive. Endoscopic RIC has a

As a new **technique** to solve the abovementioned problems, **radial incision and cutting** (RIC) has been reported in a study 6. The RIC method was developed for dilating refractory **stricture** after surgical resection for esophagogastric diseases by incising the **stricture** with an **endoscopic** electrical knife.

<https://www.thieme-connect.com/products/ejournals/...>

Endoscopic radial incision and cutting method for refractory stricture of a rectal anastomosis after surgery. Benign colorectal strictures occur mainly as a result of surgical resection [1]. Especially when a stricture is located in the rectum, it may cause severe symptoms, for which several therapeutic options are available: endoscopic balloon dilation (EBD) [2], placement of a self-expandable metal stent [3], ...

In one case series reported in 2014, colorectal anastomotic strictures were relieved using sphincterotomes, which are indicated for cannulating the biliary ducts and for transendoscopic sphincterotomy of the papilla of Vater and sphincter of Oddi ; two patients were successfully treated for anastomotic strictures using sphincterotomes (Clevercut; Olympus Medical Systems). In that report, the authors suggested that the use of sphincterotomes can be an effective and a safe treatment ...
