Retrospective Study

Effectiveness of sharp recanalization of superior vena cava-right atrium junction occlusion – A case series

Sharp recanalization of SVC/right atrium occlusion

Abstract

BACKGROUND

Conventional recanalization techniques may fail in patients with completely occluded superior vena cava (SVC).

AIM

This study aimed to analyze the effectiveness and complications of sharp recanalization

[The feasibility and safety of sharp recanalization for ...](#)

<https://pubmed.ncbi.nlm.nih.gov/31808994>

Introduction: Hemodialysis catheter-related **superior vena** cava (SVC) occlusions can cause considerable morbidity for patients and be challenging to treat if refractory to conventional guide wire transversal. This pilot study assessed the feasibility and safety of **sharp recanalization** of SVC **occlusion** in hemodialysis patients. Methods: This study retrospectively enrolled hemodialysis patients ...

[Sharp Recanalization of a Chronically Occluded Superior ...](#)

<https://meridian.allenpress.com/java/article/24/2/...> ▼

Despite conservative measures, it eventually became impossible to pass the **occlusion** via guidewire to properly place a PICC line. **Sharp recanalization** of the SVC **occlusion** with port placement was scheduled and successfully performed. The SVC was stented due to severe residual stenosis following **recanalization** and balloon angioplasty.
