Case report: two cases of extremely rare primary pure ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6156038>

Sep 14, 2018 - Case 1 was a 44-year-old woman with an elastic, hard **tumor** in the left C region. Ultrasonographic analysis revealed a maximal 11-mm hypoechoic area. Histologically, the **tumor** was a well-differentiated **squamous cell carcinoma** with prominent keratinization, and there was prominent inflammatory cell infiltration, necrosis, and fibrosis.

Breast cancer and synchronous multiple primary lung ...

<https://bmccancer.biomedcentral.com/articles/10.1186/s12885-018-5011-4> ▾

Nov 20, 2018 - The final diagnosis in the present case was **breast cancer** with synchronous **primary** lung cancers. Given the different mutational status of the EGFR gene in the two lung adenocarcinomas, it is reasonable to assume that they are oncodevelopmentally independent. The **patient** remains disease-free as of Aug 16th 2018.

Bladder metastasis from primary breast cancer: a case ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3936157>

Breast cancer is the most common malignancy in woman. The urinary bladder is an unusual site for metastasis from **primary** tumors of the **breast**, especially when it is the only organ involved. We present the **case** of a female **patient** with known **breast cancer** stage T2N3M0 who developed isolated bladder metastasis five years after the **primary** diagnosis.
