Jun 13, 2016 · In 1953, Foote and Frazell first reported in a review of salivary gland tumors a case of sebaceous adenoma, specifying that the listing of a single example of this tumor type is more an anticipation, than a proof, of its actual existence . Six years later, Rauch and Masshoff described a malignant counterpart (SC) in the parotid gland .

Hao FY *et al.* Sebaceous lymphadenocarcinoma of the parotid gland

**Abstract**

**BACKGROUND**

Sebaceous lymphadenoma is a benign tumor that occurs rarely in the salivary glands, most commonly in the parotid glands or periparotid lymph nodes, and even more rarely undergoes malignant transformation into a sebaceous lymphadenocarcinoma.

**CASE SUMMARY**

We report an 88-year-old woman who presented with a painless mass in the right parotid region. We performed extended surgical resection of the parotid gland mass. Intraoperative pathology revealed a sebaceous lymphadenocarcinoma with metastasis into the periparotid cervical lymph nodes, so we also performed neck dissection and lymph node resection. Postoperative pathology confirmed the diagnosis. The literature review revealed that this was the seventh reported case of sebaceous lymphadenocarcinoma and the second reported case of cervical lymph node metastasis
