### [An unusual presentation of metastatic malignant melanoma ...](#)

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6233537>

Reported cases of **jejuno-jejunal intussusception due to malignant melanoma metastases** acting as a lead point are scarce. The clinical presentation of such cases is often unspecific, with **abdominal pain**, nausea, and **vomiting** being the most common symptoms. **Weight loss**, **melena**, or clinically relevant **anemia** are rarely seen in adults [1, 2].

**Intussusception**, which is most often secondary in adults, can occur on **melanoma metastasis**. Computed tomography (CT) is the test that confirms **intestinal obstruction due to intussusception**. Case Report: We report the case of a 47-year-old female patient, with history of **malignant scalp melanoma**.
